

December 08, 2014.

Prof. Dr. Marcelo de Bello Cioffi

To whom it may concern

I write to confirm our collaboration with Dr. Vladimir Trifonov and his group (Laboratory of Comparative Genomics) at the Institute of Molecular and Cellular Biology, SB RAS, Novosibirsk. At the moment the Institute is quite famous and performs outstanding research using novel methods of molecular cytogenetics. Undoubtedly, the Group has a great impact in our understanding of karyotype evolution of mammals and currently focuses its research on other vertebrate groups. We have been in collaboration with the group since 2010 on a mutual research on Neotropical fish cytogenetics and published several common papers in peer-viewed journals. We hope to further broaden our collaboration and to perform visits of scientists between our labs to perform research on a new level using high throughput DNA sequencing of microdissected and flow sorted chromosomes.
